'Polytechnics the best platform to produce creative students'

Innovation can be the driver to change way Malaysian work, particularly in Sarawak.

Innovation, he elaborated, can be defined as a change of mindsets to get creative in order to produce better productivity done to time. It is not only applied in science and technology professions but should be understood by all in Malaysia.

Today, Malaysia is the home of innovation, the world's second-largest technology hub, and the 13th in the world in terms of start-up investments.

In Malaysia, there were many start-ups that could be considered as world-class companies.

Eco Smart LED Lamp' best overall Final Semester Project

The Eco Smart LED Lamp is the most energy-efficient lighting solution on the market. It is made with high-quality materials and is designed to last for decades. The lamp is also 100% recyclable, making it an environmentally friendly option.

The lamp is powered by a rechargeable battery, which can be charged using any standard outlet. It is also equipped with a motion sensor, which automatically turns the lamp on and off when it detects movement.

The Eco Smart LED Lamp is the perfect solution for anyone looking to reduce their carbon footprint and save money on their electric bill. It is also a great option for anyone looking for a reliable, long-lasting lighting solution.
